

SKILLS

- **Programming Languages:** Python, Bash/Shell Scripting
- **Tools:** Linux, AWS, Kubernetes, Terraform, Docker, Helm, ArgoCD, Jenkins, GitHub Actions, Git, CI/CD, NGINX Ingress, Datadog, Prometheus, Grafana, OpenTelemetry, Agentic AI, AIOps
- **Libraries and Frameworks:** Django, FastAPI
- **Databases & Architecture:** PostgreSQL, SQL, Redis, REST APIs, Microservices, Event-Driven Architecture (AWS SQS/SNS)

PROFESSIONAL SUMMARY

DevOps, Cloud Platform, and Backend Engineer with extensive experience in designing high-availability cloud infrastructure and building scalable Python microservices. Skilled in Python (Django, FastAPI), AWS, Kubernetes, Terraform, Docker, CI/CD pipelines, and observability tools. Proven track record of automating platform workflows, improving system reliability, and building developer tools (SDKs and CLI diagnostics) that bridge the gap between software development and platform operations.

EXPERIENCE

Independent Software Engineer

Jan 2026 - Present

- Clients: Trade360 AI, Oscillix
- *Trade Execution Service Architecture:* Engineered **5+** production FastAPI services integrating Angel One APIs for real-time market data streaming, trade execution, and authentication.
 - *GitOps & Cloud Provisioning:* Provisioned AWS EKS infrastructure using Terraform across **3 environments**, managing **20+ Kubernetes resources** and establishing continuous delivery via **ArgoCD**, **GitHub Actions**, and **Kubernetes**, boosting application deployment reliability and achieving **99.9% uptime**.
 - *Observability Integration:* Integrated end-to-end **Datadog APM**, metrics, and log pipelines to enable real-time monitoring and incident diagnosis across production workloads.
 - *ERP Customization & Deployment:* Customized core **Frappé/ERPNext** modules for Oscillix and automated deployments to **AWS Lightsail (Linux)** using **Docker** and **CI/CD**

Software Engineer

Jan 2025 - Sep 2025

- Tanish Analytics Pvt. Ltd.
- Engineering Consultant serving enterprise clients including Tensteps Technologies & AIC-Prestige
- *AI-Driven Banking Microservice (Tensteps Technologies):* Developed a GRC (Governance, Risk Management, and Compliance) **RAG** microservice for banking clients utilizing **FastAPI**, **Gemini API**, and **GraphDB** for complex data retrieval.
 - *Shared SDK & Standardization:* Authored and published a standardized **Python** utility package across all backend **microservices**, embedding unified **OpenTelemetry** instrumentation, custom exception handling, request validation, and structured **Loguru logging**.
 - *Reporting Microservice:* Designed high-throughput financial/reporting **microservices** integrated with contract workflows across multi-company engagements.
 - *Infrastructure Modernization (AIC-Prestige):* Modernized existing application deployment architecture by migrating workloads to **Kubernetes** on **AWS**, using **Terraform** for Infrastructure as Code (IaC) for the e-commerce client.
 - *DevSecOps Pipeline Security:* Strengthened **CI/CD** security quality gates by embedding **SonarQube** code analysis and **Trivy** vulnerability scanning into deployment pipelines.

Software Developer

May 2024 - Jan 2025

- M-ideas
- *Cloud-Native Application Platform:* Engineered a custom task and file management platform with **Django**; managed **AWS RDS**, **Lambda**, **AWS S3**, **Docker**, and **Kubernetes** using **Helm** and **Terraform** for cloud infrastructure setup.
 - *Event-Driven Architecture & Queues:* Integrated **AWS SQS** and **AWS SNS** message queues to decouple asynchronous background jobs and power real-time automated notifications
 - *Full-Stack Observability:* Implemented **Datadog** distributed tracing, custom system metrics, and log aggregation to ensure optimal background worker efficiency and system visibility, resulting in a **50% increase** in positive feedback and a **20% reduction** in complaints

Software Developer

Oct 2022 - Apr 2024

- Money Bloom
- *Distributed Async Engine:* Engineered a high-performance Django reporting engine for Bluechip India (Mutual Fund and insurance client), utilizing **Celery** and **Redis** to process heavy asynchronous financial data streams.
 - *On-Prem Kubernetes & Automation:* Architected automated Jenkins CI/CD pipelines to deploy containerized services onto production **Kubernetes** clusters.
 - *System Monitoring & ERP Customization:* Built customized **Prometheus** and **Grafana** alerting systems to monitor health and updated core **Frappé/ERPNext** workflows for Alufouride Ltd.

PROJECTS

Open Source Contribution in Frappe Framework

<https://github.com/frappe/frappe/issues/33736>

Contributed a merged fix to the Frappe Framework (PR #33680, backport #33674), strengthening data integrity and consistency for 500+ enterprise users.

Hyper-Scale-Ops

<https://github.com/MP-30/hyper-scale-ops>

- **Problem & Objective:** Eliminated manual deployments, configuration drift, and inconsistent release workflows by engineering a production-inspired cloud-native application delivery platform.
- **Execution:** Automated the complete software delivery lifecycle using GitHub Actions, **Docker**, **Kubernetes**, and **Helm** with reusable environment-specific deployments, NGINX Ingress, TLS, **PostgreSQL**, and **Datadog** integration.
- **Impact:** Enabled reproducible zero-downtime deployments through declarative **Terraform** and Kubernetes Rolling Updates while producing comprehensive architecture, **CI/CD**, and deployment documentation that mirrors production engineering practices.
- [Datadog-Dashboard](#) | [Live-Demo](#) | [Documentation](#)

AIOps Linux Debug Assistant

<https://github.com/MP-30/LINUX-DEBUG-ASSISTANT>

- **Problem:** Reduced manual Linux troubleshooting by building a **Generative AI** powered **AIOps** assistant for infrastructure diagnostics.
- **Execution:** Developed a modular **Python CLI** to collect Linux metrics, Docker statistics, logs, processes, and network diagnostics, then leveraged a local **LLM** through the **OpenAI**-compatible API to generate root-cause analysis and remediation commands.
- **Impact:** Automated incident analysis with AI-generated recommendations, accelerating Linux debugging and reducing debugging time by 25%, while laying the foundation for future **Agentic AI** driven self-healing infrastructure.

ACHIEVEMENTS

- Secured 2nd runner-up position in paper presentation at IIT BHU, Varanasi.
- Awarded best paper presentation in an international conference at ITM University, Gwalior.
- Selected for national model-making competition at PDPU, Gandhinagar and received funding from Gujarat Power Corp. Ltd.
- Student Ambassador for National Students' Space Challenge, IIT Kharagpur for Gwalior Region.
